The best... hair removal method

BodyMatters wants you to look your best this summer, so our weekly series will feature three treatments to get your body ready for the beach.

■ Cynosure-Elite MPX – laser salon treatment

Launched in spring 2011, this is the first such treatment to treat all skin types, including black and Asian skin. The machine emits two wavelengths allowing the surgeon to optimise the delivery of heat energy based on the individual skin type. By choosing a laser you allow for less damage to the surrounding skin. The laser beam is absorbed by the hair follicle and transformed to heat which destroys it.

From £125 per session (three to six sessions recommended). Available from the London Medical & Aesthetic Clinic, W1G and nationwide. Tel: 020 8342 1100.
